

45. Mark the spot

Impetigo

Jana the gazelle is acting strangely...

Despite the hot weather, she's bundled up and refuses to take a bath!

Cut through the black line

When her mom finally insists she removes her clothes, she can't believe it:

Jana's body is covered in red spots!

3

7

Over time, the disease has spread to the rest of her body.

At the hospital, Croco Doc asks Jana several questions.

She explains that the spots started around her mouth and have been spreading.

4

9

Most likely, Jana first got infected around her mouth.

Everything points to impetigo! A highly contagious bacterial skin infection...

Crat gets scared and hides to avoid getting infected!

When Jana touched the infected skin areas, the bacteria passed to her hand...

And then to the next part of her skin that Jana touched.

Fortunately, Croco Doc has an antibiotic that will eliminate the bacteria.

This way, Jana can get better!

Croco Doc gives the medication to Mrs. Gazelle and advises them to be careful at home not to get infected as well.

In addition, Jana will need to avoid certain things.

It's better for her not to bathe because bacteria thrive in moisture!

The only downside is that now
that she can go swimming...
The weather is terrible!

A few weeks later, Jana is completely cured.
